Open Source Painting

Creación de Pinceles

<http://ramonmirandavisualart.blogspot.com>
By : Ramón Miranda

Dab ●

MyPaint funciona mediante pinceles procedurales, o sea, generados por código y no mediante un bitmap o imagen en escala de grises. Cada trazo está compuesto por muchos "Dabs" o puntos. Cuantos más dabs tenga el pincel más complejo resulta de calcular.

Brushtroke 400%

Brushtroke 100%

Estos dabs pueden ser alterados a lo largo del trazo o pincelada. un ejemplo clásico donde mediamos el espaciamiento de la pincelada.

Spray effect

+ Values = CCW

- Values = CW

MyPaint puede modificar el color hacia los dos sentidos de la rueda de color: anti-horario (CCW) u horario (CW). Un valor de 1 produce un giro completo antihorario y -1 un giro completo horario. Normalmente no suele ser necesario un cambio tan grande, podemos variar solo el color actual media vuelta (0.5) o un cuarto de vuelta (0.25) o incluso menos.

ESCALA VALOR TONAL 0-100%

El valor tonal en nuestros dibujos se emplea para conseguir volumen. El aspecto de forma tridimensional hace que el objeto parezca estar situado en un espacio 3d. Una correcta apreciación de los valores es vital para conseguir realismo y es por eso que vamos a practicar escalas degradadas.

The screenshot shows the DeviantArt website interface. At the top, there's a navigation bar with links like SHOP, FORUM, SUBMIT, and Become CORE. Below this, the Krita-Free-Art-App group page is displayed. The page header includes the group name, a description 'Open Source Digital Painting', and statistics: 3,065 Members, 223,919 Pageviews, and 3,759 Watchers. A 'Welcome Home.' banner is present, followed by a 'What is Krita?' section. This section contains text about Krita being a free and open source KDE program for sketching and painting, offering an end-to-end solution for creating digital painting files from scratch by masters. It also mentions that Krita supports creative working by getting out of the way and with snappy response. The text further states that Krita can be downloaded for free, along with the latest news and improvements at krita.org. Documentation is available at docs.krita.org and includes introduction guides and tutorials. Users are encouraged to see what other Krita users are doing on the forums and to check out the new Facebook page. A tutorial for converting images to a nice deviantart-ready png or jpg is also mentioned. Finally, it notes that only images created with Krita are accepted and that users should tag their submissions with #Krita or #Krita_Painting. To the right of the 'What is Krita?' section is a Twitter feed showing a tweet from Claire Llewellyn Mace Art (@LlewellynArt) about a Unicorn Print available as A4 Prints or a Downloadable file, with various hashtags and a link to the Etsy shop. Below the tweet is an image of a purple unicorn.

What is Krita?

Krita is a free and open source, KDE program for sketching and painting, offering an end-to-end solution for creating digital painting files from scratch by masters.

Fields of painting that Krita explicitly supports are concept art, creation of comics and textures for rendering.

Modelled on existing real-world painting materials and workflows, Krita supports creative working by getting out of the way and with snappy response.

You can download Krita for free (as well as all the latest news and improvements) at krita.org. The documentation is online at docs.krita.org and includes introduction guides and tutorials. See what other Krita users are doing on our [forums](#). And here is our new [Facebook page](#).

If you are having trouble uploading krita made images, check this [tutorial for a step-by-step for converting your image to a nice deviantart-ready png or jpg](#).

If you have any other questions, the best place to ask them is ask.krita.org.

We only accept images that had Krita used in making them. When submitting images to this group, be sure to tag it with **Krita** or mention **Krita** in the description, so that we can verify that.

2016 Krita Developer Sprint – Deventer, Netherlands

Krita is a Free and Open Source application. Krita is mostly developed by an international team of enthusiastic volunteers. Additionally, two Krita contributors of long standing are working on Krita full-time, Boudewijn Rempt and Dmitry Kazakov. To support all the work we're doing on Krita, we welcome donations from Krita users!
