Vulnerability Details : [CVE-2021-44228](#)

Apache Log4j2 2.0-beta9 through 2.15.0 (excluding security releases 2.12.2, 2.12.3, and 2.3.1) JNDI features used in configuration, log messages, controlled LDAP and other JNDI related endpoints. An attacker who can control log messages or log message parameters can execute arbitrary code lookup substitution is enabled. From log4j 2.15.0, this behavior has been disabled by default. From version 2.16.0 (along with 2.12.2, 2.12.3, and 2.12.4) removed. Note that this vulnerability is specific to log4j-core and does not affect log4net, log4cxx, or other Apache Logging Services projects.

@yazicivo

Log4j maintainers have been working sleeplessly on mitigation measures; fixes, docs, CVE, replies to inquiries, etc. Yet nothing is stopping people to bash us, for work we aren't paid for, for a feature we all dislike yet needed to keep due to backward compatibility concerns.

twitter.com/yazicivo/status/1469349956880408583

Ralph Goers

rgoers

I am a Member of the Apache Software Foundation and am a PMC member of Apache Commons, Apache Flume, Apache Logging Services, and Apache Maven. I created the initial versions of Apache Log4j 2 and continue to focus most of my efforts there providing support and enhancements to try to make Apache Log4j 2 the best logging framework for Java developers.

I currently have a full time job as a Software Architect. I work on Log4j and other open source projects in my spare time and so I typically work on those issues that are of most interest to me. I have always dreamed of working on open source full time and would love your support to enable that to happen.

43 sponsors are funding rgoers's work.

Evan You

yyx990803

📍 Singapore

Hello! My name is Evan You and I am a full-time independent open source developer. I am the creator and project lead of [Vue.js](#), a frontend JavaScript framework for building web applications, and [Vite](#), a modern web build tool.

Both Vue.js and Vite are MIT licensed open source projects and completely free to use. The tremendous amount of effort needed to maintain the projects and coordinate the community efforts in the two ecosystems is only made sustainable thanks to the generous financial backing of our sponsors and backers.

Sponsoring as a Business

Sponsoring Vue gives you great exposure to over **1.7 million** Vue developers around the world through our website and GitHub project READMEs (see tiers for details), whereas sponsoring Vite gives you reach to a cross-framework group of early adopters in one of the most rapidly growing developer communities. In addition, supporting OSS improves the reputation of your brand, which is an important asset

Application Development

Qt for Application Development lets you create applications for desktop and mobile platforms. It contains all the Qt APIs and the Qt Creator IDE for seamless cross-platform development.

Qt for Application Development is dual-licensed under commercial and open source licenses. The commercial Qt license gives you the full rights to create and distribute software on your own terms without any open source license obligations. With the commercial license you also have access to the official Qt Support and close strategic relationship with The Qt Company to make sure your development goals are met.

Qt for Application Development is also available under GPL and LGPLv3 open source licenses. Qt tools and some libraries are only available under GPL. See the [comparison chart](#) for details. The Qt open source licensing is ideal for use cases such as open source projects with open source distribution, student/academic

Commercial License for OEMs, ISVs and VARs

Updated July, 2010

MySQL Commercial License for OEMs, ISVs and VARs

Oracle provides its MySQL database server and MySQL Client Libraries under a dual license model designed to meet the development and distribution needs of both commercial distributors (such as OEMs, ISVs and VARs) and open source projects.

For OEMs, ISVs, VARs and Other Distributors of Commercial Applications:

OEMs (Original Equipment Manufacturers), ISVs (Independent Software Vendors), VARs (Value Added Resellers) and other distributors that combine and distribute commercially licensed software with MySQL software and do not wish to distribute the source code for the commercially licensed software under version 2 of the GNU General Public License (the "GPL") must enter into a commercial license agreement with Oracle.

For Open Source Projects and Other Developers of Open Source Applications:

Open core

A traxedia dos comúns

A traxedia dos comúns

A traxedia dos comúns

É un gran compromiso, pero non se me ocorre un mellor investimento a longo prazo na saúde de WordPress en xeral. Creo que parecerá incriblemente modesto en retrospectiva. Esta proporción probablemente sexa o mínimo indispensable para un ecosistema sostible, evitando a **traxedia dos comúns**. Creo que a regra do **5%** é a que deberían seguir todos os proxectos e empresas de código aberto, polo menos se queren ser vibrantes dentro dunha década.
